Diese Scheren eignen sich hervorragend zur Eröffnung von Siebbeinzellen, unter weitgehender Erhaltung der Schleimhaut.

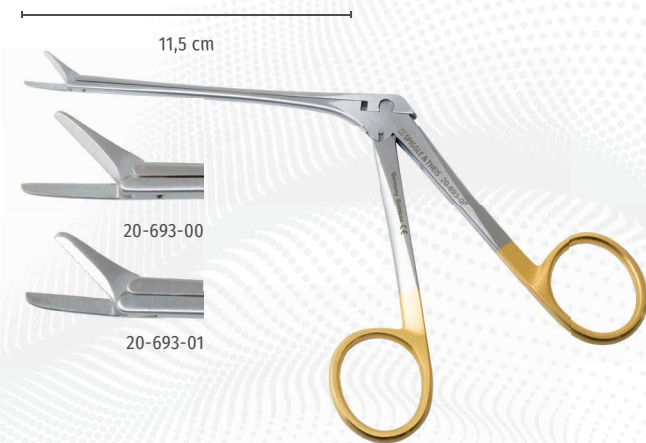

Ein „Anstechen“ und nicht „Vorschieben“ der Siebbeinschleimhaut ist mit der extra feinen und verlängerten, unteren Schneide gewährleistet.

Dr. med. Hohenhorst,
Chefarzt der HNO Abteilung des
Alfried Krupp Krankenhauses in Essen

These scissors are ideally suited for opening ethmoidal cells while keeping the mucous membrane largely intact.

The super-fine and elongated lower blade ensures that the mucous membrane of the ethmoid bone is “punctured” and not “pushed forward.”

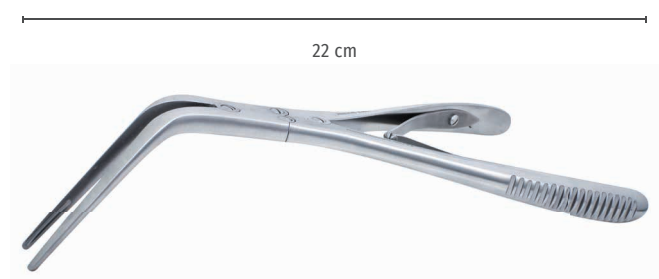

Dr. med. Hohenhorst,
Chief physician of the ENT department
of the Alfred Krupp Clinic, Essen, Germany
